

Women Everywhere

Praise Lydia E. Pinkham's Vegetable Compound

Women from the Atlantic to the Pacific, from all sections of this great country, no city so large, no village so small but that some woman has written words of thanks for health restored by Lydia E. Pinkham's Vegetable Compound. No woman who is suffering from the ills peculiar to her sex should rest until she has given this famous remedy a trial. Is it not reasonable to believe that what it did for these women it will do for any sick woman?

Wonderful Case of Mrs. Stephenson, on the Pacific Coast.

INDEPENDENCE, OREGON.—"I was sick with what four doctors called Nervous Prostration, was treated by them for several years, would be better for a while then back in the old way again. I had palpitation of the heart very bad, fainting spells, and was so nervous that a spoon dropping to the floor would nearly kill me, could not lift the lightest weight without making me sick; in fact was about as sick and miserable as a person could be. I saw your medicines advertised and thought I would try them, and am so thankful I did for they helped me at once. I took about a dozen bottles of Lydia E. Pinkham's Vegetable Compound and also used the Sanative Wash. Since then I have used them whenever I felt sick. Your remedies are the only doctor I employ. You are at liberty to publish this letter."—Mrs. W. STEPHENSON, Independence, Oregon.

A Grateful Atlantic Coast Woman.

HOPKINSON, ME.—"I feel it a duty I owe to all suffering women to tell what Lydia E. Pinkham's Vegetable Compound did for me. One year ago I found myself a terrible sufferer. I had pains in both sides and such a soreness I could scarcely straighten up at times. My back ached, I had no appetite and was so nervous I could not sleep, then I would be so tired mornings that I could scarcely get around. It seemed almost impossible to move or do a bit of work and I thought I never would be any better until I submitted to an operation. I commenced taking Lydia E. Pinkham's Vegetable Compound and soon felt like a new woman. I had no pains, slept well, had good appetite and was fat and could do almost all my own work for a family of four. I shall always feel that I owe my good health to your medicine."—Mrs. HAYWARD SOWERS, Hopkinton, Maine.

For 30 years Lydia E. Pinkham's Vegetable Compound has been the standard remedy for female ills. No one sick with woman's ailments does justice to herself if she does not try this famous medicine made from roots and herbs, it has restored so many suffering women to health. Write to LYDIA E. PINKHAM MEDICINE CO. (CONFIDENTIAL) LYNN, MASS., for advice. Your letter will be opened, read and answered by a woman and held in strict confidence.

SNOW REALLY A BLESSING

Denver Newspaper Rejoices at the Remarkable Fall of "the Beautiful" Throughout the State.

It has been said before. Let it be said again. The snow that you swept from your walks, that sifted down your collars, that got into your hair, your eyes, your tempers, is worth a million dollars to the agriculturists of Colorado. To the dry farmer who plows it into his soil it will bring rewards in a next year's bank account. Lying in the mountains it will flow down the ditches to the irrigators next season. On ranch, in orchard and truck garden it means moisture and money. To the city it means health that always comes from seasonable weather. Wade through it with a smile on your lips, shovel it with song in your heart, roll it into balls and throw at your neighbor with a laugh and a cheery word. It spells temporary inconvenience and future prosperity—and a white Christmas for the public tree that brought all Denver—all Colorado—into that new, better, greater, get-together bond of friendship and work.—Denver Times.

GAS, DYSPEPSIA AND INDIGESTION

"Pape's Diapiesin" settles sour, gassy stomachs in five minutes—Time It!

You don't want a slow remedy when your stomach is bad—or an uncertain one—or a harmful one—your stomach is too valuable; you mustn't injure it. Pape's Diapiesin is noted for its speed in giving relief; its harmlessness; its certain unfailing action in regulating sick, sour, gassy stomachs. Its millions of cures in indigestion, dyspepsia, gastritis and other stomach trouble has made it famous the world over.

Keep this perfect stomach doctor in your home—keep it handy—get a large fifty-cent case from any dealer and then if anyone should eat something which doesn't agree with them; if what they eat lays like lead, ferments and sours and forms gas; causes headache, dizziness and nausea; eruptions of acid and undigested food—remember as soon as Pape's Diapiesin comes in contact with the stomach all such distress vanishes. Its promptness, certainty and ease in overcoming the worst stomach disorders is a revelation to those who try it.—Adv.

Easy Money.

"You can't fool all the people all the time," announced the investigator. "I know it," replied the trust magnate. "There is plenty of profit in fooling half of them half the time."

No Wonder.

"Young Blivins is very well developed, isn't he?" "Yes," his father was a photographer.

At Church in Holland. In many parts of Holland men still wear their hats in church. Moreover, smoking in church is not considered irreverent by the Dutch when service is not in progress, and, it is said, even the ministers sometimes indulge in this practice. Altogether, Dutch Protestantism is, it would seem, from a certain standpoint, a comfortable form of religion. One may keep his hat on in church, which saves him many a chill; he may talk freely and in his natural voice, not in a whisper; he has a neat housemaid in a white cap and apron to show him to his pew or to offer him a chair, and he has nice drab pews of painted deal all around him and a cheerful "two-decker" pulpit above.

Caught. Mrs. Peck—John Henry, did you mail that letter? J. Henry—Yes, my dear, I—er—held it in my hand all the way to the mail box. I didn't even put it in my pocket. I remember distinctly, because— Mrs. Peck—That will do, John Henry. I gave you no letter to mail.—Judge.

Defined. Payton—Has he got a marrying income? Parker—Yes, one that necessitates wedding a rich girl immediately.

That Was Her Business. "How did that manicure ever manage to marry that old millionaire?" "She just nailed him, I guess."

SKIN CLEARED. By Simple Change in Food.

It has been said by a physician that most diseases are the result of indigestion.

There's undoubtedly much truth in the statement, even to the cause of many unsightly eruptions, which many suppose can be removed by applying some remedy on the outside.

By changing her food a Kan. girl was relieved of an eczema which was a great annoyance to her. She writes: "For five months I was suffering with an eruption on my face and hands which our doctor called eczema and which caused me a great deal of inconvenience. The suffering was almost unbearable.

"The medicine I took only gave me temporary relief. One day I happened to read somewhere that eczema was caused by indigestion. Then I read that many persons had been relieved of indigestion by eating Grape-Nuts.

"I decided to try it. I liked the taste of the food and was particularly pleased to notice that my digestion was improving and that the eruption was disappearing as if by magic. I had at last found, in this great food, something that reached my trouble.

"When I find a victim of this affliction I remember my own former suffering and advise a trial of Grape-Nuts food instead of medicines."

Name given by Postum Co., Battle Creek, Mich. Read "The Road to Wellville," in pkgs. "There's a Reason."

Ever read the above letter? A new one appears from time to time. They are genuine, true, and full of human interest.

PROTECTING FRUIT TREES FROM RODENTS

1, Corn Stalks. 2, Wire Cloth and Corn Stalks. 3, Short, Wire Cylinder. 4, The Paper Cylinder. 5, Wire Cloth and Building Paper. 6, Building Paper.

The old saying "No use to lock the stable door after the horse has been stolen" is quite applicable in the matter of protecting young and no-longer-young fruit trees against rodents. Don't wait until some of your trees are ruined before you adopt preventive measures.

The soil or cinder mound as a protection against tree injury by rodents, is very effective. Mice rarely injure trees except where grass, straw, manure, boards or trash of some kind about the base of the tree provide a hiding place; they will not come out in the open, but perform their depredations under cover. In mounding trees, first, clear away the grass or mulch from the base of the tree for a foot or more in all directions. Second, with a "post tamper," thoroughly firm the surface of the soil about the base of the tree. Third, with a few shovelfuls of fresh soil or cinders form a small mound (12 or 14 inches in diameter at the base and from four to six inches high about the stem of the tree, firming the soil well. The tops of these small mounds are usually kept quite bare by the winds and the mice will not venture out on those exposures to feed on the bark of the tree. These mounds may be left all the year, but should be repaired and tamped hard each autumn. Where cinders are available they are most excellent for mice will not burrow through cinders.

The wire screen is an ideal and complete all-round protector. True, it is more expensive than some others, but it is lasting and more effective against all kinds of rodents which prey upon young trees. Being light and open, it presents the least obstruction to strong winds; the air and sunlight are freely admitted; no dark places of concealment, such as invite woolly aphids and other forms of insect life. It is made of galvanized wire cloth of one-quarter-inch mesh (four 22-gauge wires to the inch) which may be purchased from any large supply house in rolls of 100 lineal feet and in any width from 24 to 36 inches. In adjusting to the tree allow the edges to lap about one inch.

Small meshed poultry netting protectors are made of ordinary weight mesh. This is effective against rabbits, but will not keep the mice out. In combination with a mound of soil about the base of the tree, mice will rarely prove troublesome.

It often happens that the farmer has a quantity of old poultry netting of standard mesh which he could use. Rabbits and woodchucks will not be able to seriously injure trees protected with this and if a mound is made at the tree base, mice may also be baffled.

Spiral protectors of heavy wire, while effective against rabbits, are of no avail against mice except as the trees are mounded.

Wood veneer protectors are effective.

while the wire cloth completely baffles the mice even in badly infested orchards. When trees have attained the age of six or seven years they are usually beyond the period of injury by rabbits. We then have to protect only against mice. The short, galvanized wire cloth cylinder, well imbedded in the soil about the tree base, is quite sufficient even in badly infested orchards.

In combination with soil or cinder mounds, paper wrappers are temporarily effective against rabbits, but these protectors must be removed in summer because of the fact that they afford excellent hiding places for many insect pests. A simple paper (even newspaper) wrapper will serve well for a single winter.

A high grade of building or "sheathing" paper is, of course, preferable to newspapers for tree protection. A combination of building paper and wire cloth is a trustworthy protector under all conditions. The paper may be removed and the screen retained during the growing season. The wire discourages the mice and the paper in winter is accepted by rabbits as an invitation to look elsewhere for shelter and forage.

WHY SILAGE GAINS IN PUBLIC FAVOR

Cheapest and Best Form in Which Succulent Feed Is Provided for in Winter.

(By T. E. WOODWARD.)

1. More feed can be stored in a given space in the form of silage than in the form of fodder or hay.
2. There is a smaller loss of food material when a crop is made into silage than when cured as fodder or hay.
3. Corn silage is a more efficient feed than corn fodder.
4. An acre of corn can be placed in the silo at less cost than the same area can be husked and shredded.

5. Crops can be put in the silo during weather that could not be utilized in making hay or curing fodder.
6. More stock can be kept on a given area of land when silage is the basis of the ration.
7. There is less waste in feeding silage than in feeding fodder. Good silage properly fed is all consumed.
8. Silage is very palatable.
9. Silage, like other succulent feeds, has a beneficial effect upon the digestive organs.
10. Silage is the cheapest and best form in which a succulent feed can be provided for winter use.
11. Silage can be used for supplementing pastures more economically than can soiling crops, because it requires less labor, and silage is more palatable.
12. Converting the corn crop into silage clears the land and leaves it ready for another crop.

ALBERTA CROP YIELDS

At MacLeod, Alta., weather conditions were excellent all through the season. Ninety per cent. of the wheat up to Oct. 1st graded No. 1, the only No. 2 being fall wheat. The yield ranged from 20 to 40 bushels per acre, with an average of 28. Oats yielded well, and barley about 60 bushels.

Inverary is a new district in Alberta. Here wheat graded No. 2 and some of it went 50 bushels to the acre, oats going about 75 bushels.

Lethbridge correspondent says: "In the Monarch district the yield on summer fallow is averaging thirty-five bushels, a large percentage No. 1 northern."

"All spring grains are yielding better than expected in the Milk river district, south. A 300 acre field of Marquis wheat gave 41½ bushels.

"Experimental farm results on grain sown on irrigated land place 'Red Fife' wheat in the banner position, with a yield of 59.40 bushels per acre. Oats yielded 132 bushels to the acre.

"John Turner of Lethbridge grew barley that went 60 bushels to the acre.

"Red Fife averages in weight from 60 to 68 pounds, and at Rosthern the Marquis wheat will run as high as 64 pounds to the bushel, while a sample of Marquis wheat at Arcola weighed no less than 68 pounds to the bushel. This variety is grading No. 1 hard."

Calgary, Alta., Oct. 8.—The problem of handling Alberta's big grain crop is becoming a serious one, and there is a congestion at many points in southern Alberta. One thousand cars could be used immediately. The C. P. R. prepared for a normal year, while the yield of grain was everywhere abnormal, with an increased acreage of about 25 per cent.

Moose Jaw, Sask., returns show some remarkable yields.

Bassano, Alta., Sept. 25, '13.—Individual record crops grown in Alberta include 1,300 acre field of spring wheat grown near Bassano which went thirty-five bushels to the acre and weighed sixty-six pounds to the bushel.

Noble, Alta., Oct. 1, '13.—All records for the largest shipment of grain by one farmer will be broken this year if the estimate of C. S. Noble of Noble, Alberta, proves correct. Mr. Noble has notified the Canadian Pacific Railway here that he will have 350,000 bushels of grain, chiefly barley and oats, ready for shipment very shortly.

L. Anderson Smith, writing to a friend in the Old Country, located at Killam, Alberta, says:

"Anyone taking up land will find Alberta an ideal province. The soil is a rich black loam, varying from 6 to 12 inches in depth. The land here in this district is not wholly open prairie. At intervals, sometimes closely, sometimes widely scattered, there are small plots of poplar and willows. These generally grow round some small depression in the land, and the snow drifts here in the winter and melts in the spring filling these sloughs (province "slews") with soft water. Nearly all these sloughs have old buffalo tracks to them, for it was from them that they always got their water. The poplars are very useful for building barns and hen-houses. Wild grasses are plentiful, while tame grasses, such as timothy, brome and western rye grass do remarkably well.—Advertisement.

Adventures of a Guide. "What did that hunter shoot while he was up here?" "Me and a deer; both by accident."

Calumet the Secret of Economy

The high cost of living nowadays, and the way prices are steadily climbing skywards, is making economy in the kitchen even more important than it was in the good old days of our thrifty ancestors. But how to achieve economy? There's the rub!

In many lines, it depends almost entirely on the housewife's knowledge of foods and on her watchfulness—but fortunately, in one line, baking, economy can be made almost automatic by the use of the famous Calumet Baking Powder.

Economy in baking, as every good cook knows, depends not so much on economy in buying the materials as on the success of her bakings. Failures mean waste—bigger losses by far than the savings she makes in buying. And the fact that Calumet absolutely prevents failures and makes every baking successful has made it the favorite of every cook that seeks to be economical. In other words, Calumet is the secret of economy in baking.

It is the purest, too—attested by hundreds of leading physicians—and as for its general quality, it is enough to say that Calumet has received the highest awards at two World's Pure Food Expositions—one in Chicago, Ill., and the other in Paris, France, in March, 1912. Adv.

Just an Accident.

BILL—Was he ever in a railroad accident? JILL—Yes, but he came out all right.

"What was it?" "He proposed marriage to a girl on a train and she refused him."

No, Cordelia, it may not be a charitable instinct that prompts a man to give himself away.

Water in bluing is adulteration. Glass and water makes liquid blue costly. Buy Red Cross Ball Blue, makes clothes whiter than snow. Adv.

The man who is placed on a pedestal must take a certain amount of pride in his very loneliness.

Coughs and Colds cannot hold out against Dean's Mentholated Cough Drops. A single dose gives relief—at all drug stores.

The average man thinks he knows all about women—till he marries one.

Feel Comfortable

After eating a Hearty meal?—or is there a sense of fullness—or bloating—or Nausea. This indicates a weakened condition of the Stomach which can be materially benefited by a short course of
